

Homework Assignment 6A

Section C

Swetha Kannan

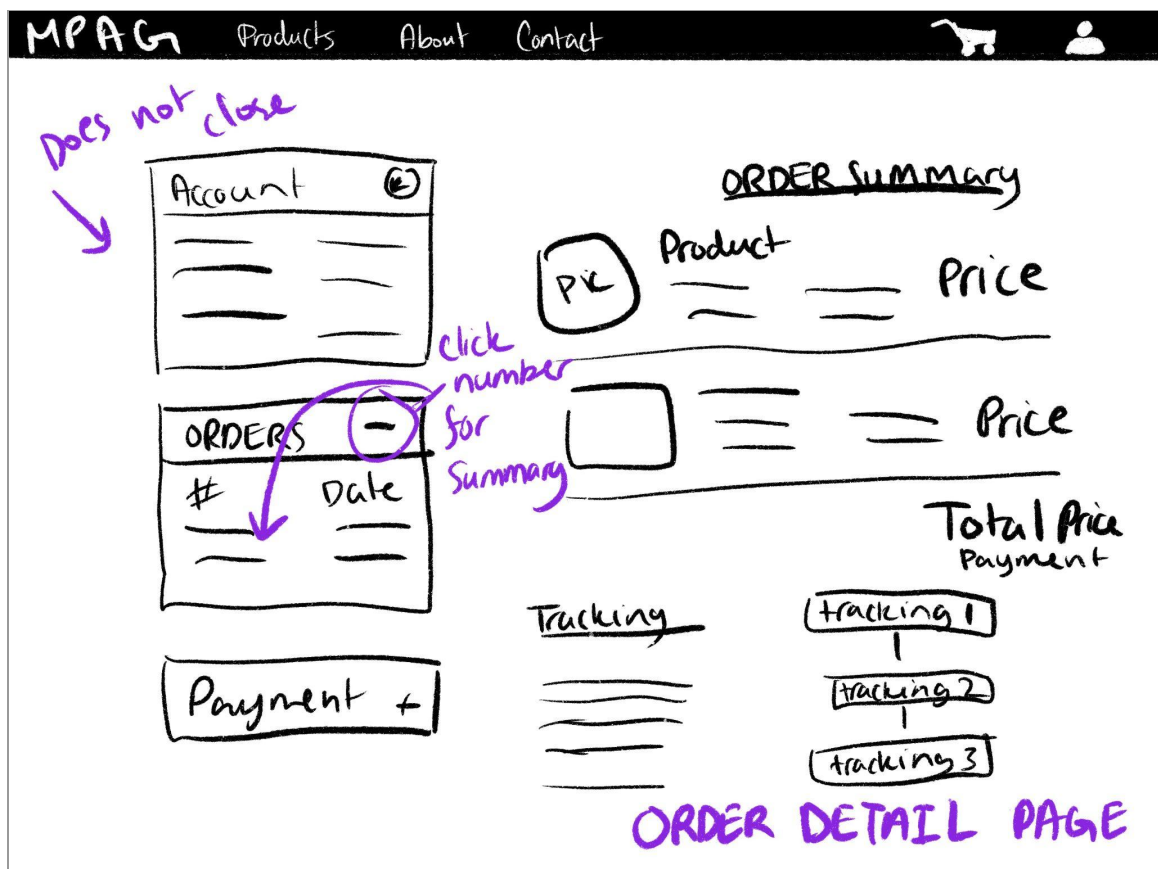

Lo-Fi prototype:

I already created a shopping cart page in my previous iteration so I decided to sketch up a lo-fi prototype of a potential 'order detail' page. This way, a user who is signed into their account can go to their account setting and then see the order details page.

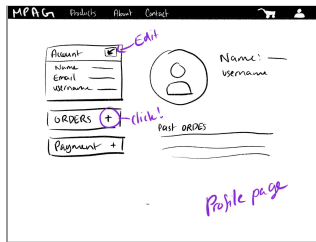

Design choices:

I tried to do a small competitive analysis to see how other companies make an order detail page. Originally, I was going to just keep it as a page to check tracking information but I found that most sites also included the items that were in the order, the payment method that was used and an option to cancel the order.

I tried to incorporate all of these elements and also had a left-side menu that would take a user to other spaces in their user profile. In an ideal situation, these menu tabs would also be click-able and lead to other spaces.

Users would navigate to the orders page via an initial profile page (not implemented in Javascript/JS):

In the implementation, they would navigate to this page via the user icon on the top right of the menu bar:
