Homework Assignment 6A
Section C
Swetha Kannan

Hi-Fi prototype:

For this high-fidelity prototype, I decided to first redo my shopping cart page to be more user-friendly and to include common elements from other shopping cart pages from across the internet. This way, I hope that my design is more recognizable and friendly for the user since I am using design patterns that they should recognize.

For this assignment, I also improved upon my lo-fi prototype in order to create a 'order detail' page (page #3 of this document). A user who has an account on the website can check the status of their previous orders. I added a user icon to the top navigation bar on all my pages in order to allow the user preference menu to be accessible.

Design choices

For both these prototypes I kept in consideration the colors and background images I used for previous iterations. The images I used were all from FontAwesome.com and are elements that were repeated in previous pages. I also tried using similar font sizes throughout each page. In this way, I hope the design reflects the identity of the brand and has the same aesthetic as the rest of my store.

For readability, I kept things separated into grids and on occasion used a very light grey border to separate components. I think this helps in readability- the grey borders indicate 'top-level' information while everything else is a more detailed view.
